

## Corrigendum

## Corrigendum to “Search for flavour-changing neutral-current couplings between the top quark and the photon with the ATLAS detector at $\sqrt{s}=13$ TeV” [Physics Letters B 842 (2023) 137379]

## The ATLAS Collaboration

The authors regret “The values in Table 2 for the branching fractions were missing a factor of  $10^{-5}$ . The correct version of the Table is pro-

vided in [Table 1](#).”

The authors would like to apologise for any inconvenience caused.

**Table 1**

The 95% CL limits on the effective coupling constants, BRs and production cross-sections. The expected limits with their uncertainties, representing one standard deviation, as well as observed limits are shown. The scale of new physics is set to  $\Lambda = 1$  TeV.
