

INTERNATIONAL CONGRESS 2023

MILAN Italy, 9-13 September

PROGRAMME

Occupational COPD; ten years' experience from a UK occupational lung disease reporting scheme

PA3354 Ruth Wiggans (Manchester (Greater Manchester), United Kingdom), David Fishwick, Loren Zelic, Rheanna Pereira, Laura Byrne, Melanie Carder, Martie Van Tongeren

Correlation between reduced lung attenuation in quantitative CT imaging and lung function trajectory in World Trade Center (WTC) disaster responders

PA3355 Rafael E. de la Hoz (New York, United States), Jonathan Weber, Raúl San José Estépar, John Doucette, Juan Celedón

Evaluation of Voice Quality in Pulmonary Function Tests Laboratory Technicians

Gökçen Ömeroğlu Şimşek (Izmir, Turkey), Melike Yüksel Yavuz, Nejdiye Güngördü

PS-12 in poster area**Session 343****16:00 - 17:30****Poster session: The bugs in lung transplantation**

Disease(s) : Respiratory critical care Interstitial lung diseases Airway diseases

Method(s) : Pulmonary function testing Transplantation Cell and molecular biology Endoscopy and interventional pulmonology Imaging Respiratory intensive care

Tag(s) : Clinical

Chairs : Vicky Gerovasili (Rickmansworth, United Kingdom), Peter Jaksch (wien, Austria)

Microbiological surveillance after lung transplant: focus on fungi

PA3357 Irene Tomarelli (milano, Italy), Filippo Maraz, Valeria Rossetti, Letizia Corinna Morlacchi, Ilaria Righi, Davide Tosi, Marco Mantero, Mario Nosotti, Francesco Blasi

The pleural microbiome in lung transplant recipients and non-transplant patients

PA3358 Carlo Mümmler (München, Germany), Michael Gerckens, Silvia Gschwendtner, Diego Kauffmann-Guerrero, Katrin Milger, Jürgen Behr, Nikolaus Kneidinger

PA3359 Treatment of fungal infections in lung transplant recipients: is standard dose adjustment of tacrolimus sufficient?
Tanja Zijp (Groningen, Netherlands), Fadia Hadi, Stephan Bakker, Job Van Boven, Tji Gan, Daan Touw

PA3360 Transmission and persistent SARS-CoV-2 infection in a lung transplant recipient with Molnupiravir-induced hypermutation
Bjoern Frye (Freiburg, Germany), Ina Hettich, Vivien Karl, Lena Jaki, Daiana Stolz, Maike Hofmann, Jonas Fuchs

PA3361 Lung Transplantation for COVID-19-Related Respiratory Failure: 1-year outcome of 29 patients
Zsófia Kovacs (Wien, Austria), Peter Jaksch, Konrad Hötzenecker, Gabriella Muraközy

PA3362 Use of Favipiravir as a Broad-Spectrum Virostatic Drug in Lung Transplant Recipients
Andrea Zajacova (Prague, Czech Republic), Eliska Dvorackova, Luis Fernando Casas-Mendez, Ales Brixi, Tereza Kotowski, Jan Havlin, Robert Lischke, Libor Fila, Petr Hubacek

PA3363 Program cell death 1 (PD1) and program cell death ligand 1 (PDL1) expression in pulmonary aspergillosis with and without SARS-CoV-2 virus infection.
Shiang-Fen Huang (Taipei, Taiwan), Kun-Ta Chou, Yu-Chi Huang, Hao-Chia Lin, Ping-Feng Wu

PA3364 Plasma virome dynamics after lung transplantation
Victoria Ruiz (Barcelona, Spain), Vicente Pérez-Brocal, Meritxell Boada-Pérez, Berta Saez, Ibai Los-Arcos, Maria Deu, Marta Zapata-Ortega, Judit Sacanell, Alba Santiago, Andrés Moya, Victor Monforte, Cristina Berastegui, Susana Gomez-Ollés

PA3365 The impact of COVID-19 on long term lung function in lung transplant recipients: a single-center retrospective study
Brice Touilloux (Fribourg, Switzerland), Matthaios Papadimitriou-Olivgeris, Cédric Bongard, Nahal Mansouri, Foteini Ioakeim, John-David Aubert, Oriol Manuel, Angela Koutsokera, Alessio Casutt

PA3366 Late Breaking Abstract - Bedside non-invasive radiation-free lung ventilation/perfusion mapping by electrical impedance tomography in lung transplant recipients
Vittorio Scaravilli (MILAN, Italy), Jacopo Fumagalli, Valentina Cattaneo, Francesco Damarco, Letizia Morlacchi, Giacomo Grasselli

PA3367 Late Breaking Abstract - Speckle-tracking right ventricle free wall longitudinal strain: a new non-invasive highly sensitive tool for screening right ventricle function of lung transplant candidates
Paolo Meani (Milan, Italy), Vittorio Scaravilli, Silvia Scansani, Letizia Morlacchi, Valeria Rossetti, Marco Vicenzi, Gloria Turconi, Valeria Musso, Amedeo Guzzardella, Mario Nosotti, Francesco Blasi, Giacomo Grasselli

PA3368 Late Breaking Abstract - High burden of early complications in outcome of lung transplantation for non-cystic fibrosis bronchiectasis
Sixtine Decaux (Paris, France), Antoine Roux, Hervé Mal, Matthieu Glorion, Sandra De Miranda, Edouard Sage, Vincent Bunel, Yves Castier, Arnaud Roussel, Philippe Montravers, Pierre Mordant, Jonathan Messika

Late Breaking Abstract - Speckle-tracking right ventricle free wall longitudinal strain: a new non-invasive highly sensitive tool for screening right ventricle function of lung transplant candidates

Vittorio Scaravilli, Paolo Meani, Silvia Scansani, Letizia Morlacchi, Valeria Rossetti, Marco Vicenzi, Gloria Turconi, Valeria Musso, Amedeo Guzzardella, Mario Nosotti, Francesco Blasi, Giacomo Grasselli

Abstract

Lung transplant (LUTX) candidates frequently have secondary right ventricular (RV) dysfunction, which standard assessment has poor sensitivity and high logistical footprint. In this single-center prospective observational cohort study on bilateral LUTX patients, the preoperative RV free-wall longitudinal strain (RVFWLS) was compared to conventional RV echocardiographic (tricuspid annular plane excursion – TAPSE, fractional area change – FAC, tricuspid peak annulus systolic velocity - S') and ventriculographic tests. Of the 44 enrolled patients, 10 had poor RV window. Compared to standards, LUTX candidates had statistically significant impaired RVFWLS (20.1% [-22.5% – -17%], p<0.001): 47% having pathologic RVFWLS (> -20%), and 15% normal standard tests, but altered RVFWLS (Fig1).

[More info](#)

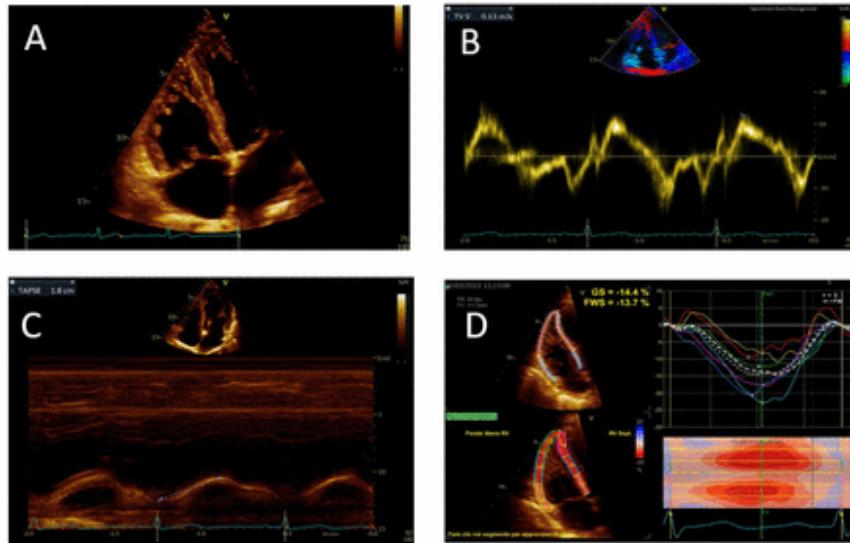

Figure. Example of different measures of RV systolic function in a LUTX candidate, with normal FAC, S', and TAPSE, but altered RVFWLS. The apical RV-focused view is performed (A), the tissue Doppler positive peak systolic wave velocity is normal (0.13 cm/s) (B), the TAPSE by M mode is normal (18 mm)(C), but the RV free wall longitudinal strain by speckle-tracking echocardiography (D) is significantly altered (-13.7%).

[Download powerpoint](#)

RVFWLS identified the highest percentage of impaired RV function (47%) compared to conventional echocardiographic parameters (TAPSE, 32%; S', 27%; FAC, 26%) and ventriculography (15%) (Table1: Conventional RV tests vs. RVFWLS).

[View inline](#)

The RVFWLS provides sensitive, non-invasive, repeatable, and radiation-free RV assessment compared to standard tools in LUTX candidates.
