The acknowledgement was omitted from the original article.

### Acknowledgments

This paper is one of the result of the activity of the Working Group 4 of the “Research Project on Georgian Grape and Wine Culture” promoted by the National Wine Agency of Georgia. We would like to express our sincere thanks to all the people involved in the COST ACTION FA1003

– Grapenet: East–west Collaboration for Grapevine Diversity Exploration and Mobilization of Adaptive Traits for Breeding, to the Hydrometeorology Department of the National Environmental Agency of Georgia and to the Georgian National Wine Agency.

Special thanks to the Scientific-Research Center of Agriculture and to the Research Institute of Viticulture and Oenology of the Agricultural University of Georgia for providing phenological data from their grapevine collections.
