

UNIVERSITÀ DEGLI STUDI DI MILANO

Scuola di Dottorato in Scienze Biologiche e Molecolari

XXV Ciclo

**NEW INSIGHTS INTO THE STRUCTURAL AND  
BIOCHEMICAL PROPERTIES OF HUMAN  
RENALASE:  
A NOVEL FLAVOENZYME INVOLVED IN BLOOD  
PRESSURE REGULATION**

**Sara Baroni**

PhD Thesis

**Tutor: Prof. A. Aliverti**

**Co-tutor: Dr. G.V. Desir**

Academic year: 2011-2012

SSD: BIO/10

Thesis performed at Dipartimento di Bioscienze, Università degli Studi di Milano and Department of Medicine, Yale University

# CONTENTS

## Appendix 1

*New insights into the structural and biochemical properties of human renalase: a novel flavoenzyme involved in blood pressure regulation.*

<b>Abstract</b> .....	<b>1</b>
<b>State of the Art</b> .....	<b>3</b>
<b>Aim of the Project</b> .....	<b>34</b>
<b>Main Results</b> .....	<b>36</b>
<b>Conclusions and Future Prospects</b> .....	<b>44</b>
<b>Supplemental Results</b> .....	<b>47</b>

## Appendix 2

*Elucidation of the role of Y258 residue of *P. falciparum* Ferredoxin-NADP<sup>+</sup> reductase (PfFNR) in the control of NADPH specificity.*

<b>State of the Art</b> .....	<b>61</b>
<b>Aim of the Project</b> .....	<b>63</b>
<b>Main Results</b> .....	<b>63</b>
<b>Conclusions and Future Prospects</b> .....	<b>66</b>
<b>References</b> .....	<b>67</b>

## PUBLICATIONS
